

Factorio — Payer (Debtor) User Guide

For payers / debtors — the buyers who owe the invoices. The payer anchors the credit in factoring: a specific, buyer-confirmed obligation. Sign in with the **Payer** role.

Payers confirm invoices so their suppliers can be financed, and (in reverse-factoring / supply-chain-finance programmes) can offer early payment to their whole supplier network without breaking their own terms.

Invoices to confirm

The invoices where you are named as the debtor, with amount, due date and status. **Confirm** the obligation (or dispute it) — confirmation is what lets the supplier draw an advance; on the SoliqOnline rails this confirmation is on official record.

Reverse factoring (supply-chain finance)

As a large buyer you can run a **reverse-factoring programme**: approve early payment for hundreds of suppliers at once. Suppliers get paid early; you keep your payment terms; the platform (funded by the bank, investors or an SPV) bridges the gap. See the money-flow diagram in the main product guide.
