

Factorio — User Guide

Live at factorio.co.uk · hello@factorio.co.uk

Factorio is an invoice-financing (factoring) marketplace. Businesses sell their unpaid invoices for cash today; investors fund those invoices for a short-term, asset-backed return; the back office runs the credit, funding and collections behind it.

This guide is organised by **who you are**. It is split into four clearly separated parts — one per persona. Jump to the part that matches your role; each starts on its own page with a coloured separator.

Part	Persona	Sign in as	What you do
1	Investor	Investor	Fund verified invoices; track a portfolio of short-term, asset-backed returns
2	Supplier	Supplier	Sell / discount unpaid invoices for cash in 24–48 hours
3	Payer	Payer	Confirm invoices you owe; run supplier early-payment programmes
4	Admin	Admin	Operate the factoring business — onboarding, risk, funding, collections, compliance

Every signed-in view is the same **cockpit**: a left rail with two sections — **Agents** (the **AI Assistant** chat, which opens in the centre — with a **New chat** button and your recent chats beneath it) and **Tools** (your screens). The Copilot answers questions grounded in live data; the Tools list is **role-scoped**, so you only ever see what belongs to your role. There are four roles — Investor, Supplier, Payer and Admin — switchable from the top bar.

PART 1 OF 4 · SIGN IN AS “INVESTOR”

Investor

Put capital into verified invoices for short-term, asset-backed returns.

For investors / funders. The app opens on the **Copilot** — a central AI chat (the Agents view) — with your Tools in the left rail. Amounts are shown in USD (multi-currency supported).

AI Assistant (Agents)

The landing view: a central chat that answers questions grounded in **your own live positions** — net return, exposure by sector or debtor, overdue positions, upcoming settlements. Suggestion cards sit below the input; past conversations live in the left rail (New chat + history).

Dashboard

Your personalised overview: **portfolio value**, **net annual return**, **earned to date** and the next **settlement**, a recent-activity feed, and quick actions.

Marketplace

Every open, fundable invoice as a card — debtor, sector, risk grade (A–D), amount and a live funding-progress bar — with advance rate, fee and estimated return. Filter by sector, grade, term and minimum return.

Invoice detail

Full transparency before funding: the funding panel (raised vs goal, advance, fee, estimated return) and a **debtor-company profile** (registration, sector, country, turnover).

Portfolio

The reporting cockpit: **net annual return** and **account value** panels, an **aging table** (days to / past due), a **payment-habits table** (how settled invoices actually paid), and a positions table.

Statement

A unified ledger of cash movements — investments out (–) and settlements in (+) — filterable by date, type, counterparty and amount, with CSV export.

Auto-invest

Rule-based automated bidding: minimum risk grade, maximum amount per invoice and preferred sectors — applied to matching new invoices.

The screenshot shows the Factorio web interface. The top navigation bar includes 'Sign in / Sign out', 'ROLE Investor', and 'VIEWING AS Investor'. The left sidebar lists 'AGENTS' (AI Assistant, New chat) and 'TOOLS' (Dashboard, Marketplace, Auctions, Secondary, Portfolio, Statement, Auto-invest, AI Triage, AI Reports). The 'Auto-invest' section is active, displaying a settings card. The card has a status toggle set to 'Inactive'. It includes a 'MINIMUM RISK GRADE' dropdown set to 'B', a 'MAX PER INVOICE' text input set to '10000000.00', and a 'PREFERRED SECTORS' text input set to 'agriculture,construction'. A checkbox for 'Enable auto-invest' is unchecked. A 'Save settings' button is at the bottom.

AI · PORTFOLIO REPORTING

Ask anything about your portfolio

The assistant answers from your own positions — net return, outstanding interest, concentration by debtor or sector, upcoming settlements and more. Grounded in your live portfolio data.

FACTORIO AI

Hi! I can answer questions about your portfolio — returns, outstanding positions, concentration and settlements. What would you like to know?

e.g. What's my exposure to construction? Which positions are overdue?

Send

PART 2 OF 4 · SIGN IN AS “SUPPLIER”

Supplier

Sell or discount your unpaid invoices for cash today instead of waiting 30–90 days.

For suppliers / clients. Factoring, not a loan — no new debt on your balance sheet; funding scales with your sales. Sign in with the **Supplier** role.

My applications

Your submitted invoices with debtor, amount, risk grade and status (submitted → verified → funding → funded → settled). Track each from submission to advance.

AI • APPLICATION TRIAGE

Get your invoice triaged in a chat

Describe your invoice and debtor in plain language. The assistant collects what's missing, then gives an indicative risk band, advance rate and the documents the bank will need next.

FACTORIO AI

Hi! I'll help triage your invoice for financing. To start, tell me: which company issued the invoice, who the debtor (buyer) is, the invoice amount, and its due date?

e.g. We invoiced Artel for \$38,000, due in 60 days...

Send

The supplier journey

1. **Sign up** (bank KYC).
2. **Submit / import** an invoice (SoliqOnline-verified, buyer-confirmed).
3. **Triage** in chat → indicative terms.
4. **Approval** by the bank (one click) → collateral registered.
5. **Advance** in your account in 24–48 hours; the reserve is released when the debtor pays.

Payer

Confirm the invoices you owe so your suppliers can be financed — and pay your network early without breaking your terms.

For payers / debtors — the buyers who owe the invoices. The payer anchors the credit in factoring: a specific, buyer-confirmed obligation. Sign in with the **Payer** role.

Invoices to confirm

The invoices where you are named as the debtor, with amount, due date and status. **Confirm** the obligation (or dispute it) — confirmation is what lets the supplier draw an advance; on the SoliqOnline rails this confirmation is on official record.

The screenshot shows the Factorio web application interface. The top navigation bar includes the Factorio logo, links for 'Sign in' and 'Sign out', a 'ROLE' dropdown menu set to 'Payer', and a flag icon. The left sidebar contains sections for 'AGENTS' (with 'AI Assistant' and 'New chat') and 'TOOLS' (with 'Invoices to confirm' highlighted). The main content area is titled 'PAYER Invoices to confirm' and includes a sub-header: 'Invoices where **Zorg Industries** is the debtor. Confirm the obligation so suppliers can be financed.' Below this is a table with the following data:

INVOICE	AMOUNT	DUE	STATUS	DOCUMENT
INV-20260011	\$199,705	2026-05-28	funding	View Confirmed
INV-20260025	\$183,266	2026-06-08	funding	View Confirmed
INV-20260010	\$18,159	2026-08-15	funding	View Confirmed
INV-20260020	\$97,544	2026-08-24	settled	View Confirmed

View opens the invoice PDF in a right-hand pane (debtor highlighted) so you can check the obligation before confirming.

Payment due within 15 days of the issue date to the account or on assignment, payment must be made to the assignee's collection invoice network. Generated for demonstration — synthetic data

Reverse factoring (supply-chain finance)

As a large buyer you can run a **reverse-factoring programme**: approve early payment for hundreds of suppliers at once. Suppliers get paid early; you keep your payment terms; the platform (funded by the bank, investors or an SPV) bridges the gap.

Admin — Back Office

Operate the factoring business: onboarding, risk, funding, collections, accounting and compliance — under role-based access control with full audit logging.

For internal back-office users. Reached from the **Console** tool (or `/app/admin`). Admin is a single **full-access** role — it sees every Tool in the left rail (onboarding, processing, risk, credit scoring, funding, collections, accounting, compliance, integrations, reports, audit — plus the Sales pipeline and Workspace) and the **Copilot** for data questions. Every state-changing action is written to the audit log. The **Role** switcher (top-right) moves between the four roles.

1 · Client & debtor onboarding / management

Screen: Onboarding. KYC/AML status per client and debtor, sector, country, annual turnover, and a derived **facility limit** (advance rates 70–90%). Admin sets the facility limit; the value is derived from turnover and grade.

Catalyst Chemicals	approved	—	B	\$6,438,900	—
Catalyst Chemicals	approved	—	B	\$21	—
Cornerstone Building Materials	approved	—	A	\$35	—

2 · Invoice processing & verification

Invoices arrive verified against SoliqOnline (buyer-confirmed), assigned, and risk-graded. The pipeline and detail views show amount, advance rate, grade and status; holdback/reserve is the difference between face value and advance.

3 · Funding & disbursements

Screen: Funding. The funding pipeline lists verified/funding invoices with amount, grade, computed advance and status. **Approve & release** disburses the advance; every approval is written to the audit log.

BACK OFFICE · CREDIT SCORING

Credit scoring

Multi-signal debtor scoring with model back-testing (actual vs expected default).

Score fuses observed payment/default history, concentration and sector risk with bureau + open-banking signals (the external feeds are simulated pending integration). Model produces the grade, advance and price; a human approves.

DEBTOR	SCORE	GRADE	EXP. PD	ACTUAL DEFAULT	ADVANCE	PRICE	ADVERSE-ACTION REASONS
Umbrella Industries	90	A	1%	0%	90%	250 bps	no material flags
Prestige Worldwide	84	A	1%	—	90%	250 bps	no material flags
Globex Corporation	84	A	1%	0%	90%	250 bps	no material flags
Soylent Corp	84	A	1%	—	90%	250 bps	no material flags
Vandelay Industries	78	A	1%	—	90%	250 bps	no material flags
Zorg Industries	76	B	3%	0%	85%	350 bps	no material flags

Model back-testing. The differentiator: **actual vs expected default rate** per grade — the model-accuracy metric — so calibration drift is visible and the model can be re-tuned.
