

Factorio for Hospitality

Invoice finance & supply-chain finance for hotels, restaurants and their suppliers

A proposal by Consistente Ltd. An AI-native, multi-currency invoice-finance platform tailored to the hospitality sector — turning long payment terms and seasonal cash-flow gaps into working capital for operators and their supplier networks, and into short-term, asset-backed returns for investors.

Prepared by Consistente Ltd · Tallinn · info@consistente.tech · consistente.tech

1. Executive summary

- **The problem.** Hospitality runs on thin margins and long, uneven cash cycles: operators pay suppliers on 30–90 day terms, OTAs and corporate/event clients settle slowly, and demand is seasonal. Suppliers (F&B distributors, linen and laundry, events, maintenance) carry the financing gap.
- **The solution.** Factorio finances the receivable — **factoring / invoice discounting** for suppliers and **reverse factoring (supply-chain finance)** for operators — so suppliers get paid now and operators keep their terms. Priced on a **reverse-auction** marketplace so funding costs fall as investor demand rises.
- **AI-native.** Chat-based application triage and investor reporting ship today; open-banking-style credit scoring underwrites both the supplier and the debtor.
- **Multi-currency & cross-border.** Built for EUR / USD / GBP and local currencies — the norm in a sector with international guests, groups and imports.
- **For investors.** Short-duration, sector-diversified, asset-backed exposure with target net returns in the low-to-mid teens (Investly's comparable book ran ~13% realised net return at a 0% default rate on verified receivables).

2. The hospitality opportunity

Hospitality is a large, fragmented, credit-terms-driven B2B economy — exactly the shape invoice finance serves best.

- **Long terms, slow payers.** Operators buy on 30–90 day terms; OTAs, corporate travel desks and event clients pay slowly. ~80% of B2B trade runs on credit.
- **Seasonality.** Revenue peaks and troughs (summer, festive, events calendar) create acute working-capital swings that term loans fit poorly.
- **A deep supplier chain.** Every hotel and restaurant sits on top of F&B distributors, beverage wholesalers, linen/laundry, cleaning, maintenance, furniture/FF&E, events and staffing suppliers — all financeable.
- **Under-served by banks.** SMEs in the chain are frequently declined for unsecured credit; the invoice is a better-secured, self-liquidating asset.

Why now. Digitised invoicing and open banking make supplier and debtor cash-flows verifiable in real time, so underwriting that used to take weeks now takes seconds — and a marketplace can price the risk competitively.

3. Hospitality use cases

#	Scenario	Product	Who benefits
1	An F&B distributor waits 60 days on invoices to a hotel group	Factoring / invoice discounting	Distributor gets ~85% advance now
2	A hotel group wants to pay 200 suppliers early without using its own cash	Reverse factoring / SCF	Suppliers paid early; group keeps terms
3	An events / catering company fronts costs before a corporate client pays	Factoring (single-invoice / spot)	Immediate liquidity for the next event
4	A linen & laundry supplier needs seasonal working capital	Revolving invoice discounting	Funding scales with sales, not a fixed loan
5	A boutique hotel bills an OTA / corporate desk in another currency	Cross-border factoring (multi-currency)	Paid now, FX handled by the platform

Each maps to the same money flow (\$5) — only the capital source and the notification model (disclosed vs confidential) change.

4. The platform

- **AI triage (seller side).** A supplier describes an invoice in plain language; the assistant returns an indicative risk band (A–D), advance rate and the documents needed — in seconds. (*Live prototype* — see Appendix A.)
- **AI reporting (investor side).** Investors ask questions grounded in their own live positions — exposure by sector/debtor, overdue positions, upcoming settlements. (*Live prototype.*)
- **Open-banking-style credit scoring.** Fuses accounting data, bank-transaction cash-flow signals and bureau data to score **both the supplier and the debtor**, with model back-testing (actual vs expected default) — Investly's discipline.
- **Reverse-auction pricing.** Investors bid rate + amount; the supplier gets the lowest available cost of funds. Fixed-rate offers also supported.
- **Multi-currency.** EUR / USD / GBP / local, per-facility base currency, FX for cross-border deals.
- **Sector-aware.** Hospitality is a first-class dimension for concentration limits, risk analytics and tailored onboarding.

5. How the money moves

The **payer (debtor)** — the hotel or restaurant group — anchors the credit. In a reverse-factoring programme the payer initiates and approves early payment for its suppliers; in factoring the supplier initiates. Either way the flow, and the pluggable capital layer (bank → investors → SPV), is identical.

6. Journeys

Supplier (origination): sign up (KYC) → invoice imported / uploaded → request financing in an AI-triage chat → debtor scoring + indicative terms → approval → advance in 24–48 hours.

Investor: onboard (KYC / accreditation) → commit capital (marketplace or SPV) → auto-invest or pick invoices → hold with AI reporting → principal + return distributed at maturity → reinvest or trade on the secondary market.

7. Pricing & returns (illustrative, Investly-informed)

Party	Economics
Supplier fee	~1.5–2.5% per invoice financed (effective APR ~18–30% vs 24–48% traditional factoring)
Advance rate	70–90% of invoice value; reserve released on debtor payment
Investor return	Target low-to-mid teens net; short duration (avg ~30–60 days)
Secondary market	~1% on position trades (liquidity for investors)
Platform (Consistente)	Volume-based basis points — paid only on financed volume; no SaaS licence

Reverse-auction competition drives the supplier's cost toward the floor while still clearing investor demand — the mechanism that let Investly undercut both banks and first-generation invoice-trading platforms.

8. Investor capital & SPV

Funding is a **pluggable layer**: an operator or bank balance sheet, a retail / institutional investor marketplace, or a **bankruptcy-remote SPV** for international and (optionally) Shariah-compliant capital — the same structure set out in `universalbank_consistente_proposal`. Hospitality receivables are **uncorrelated** with real estate and equities, giving investors genuine diversification with short duration.

9. Roadmap

Phase	Focus
0 · now	AI triage + reporting live; sector-aware onboarding; multi-currency
1 · M1–3	Supplier onboarding, invoice verification, factoring GA for one hospitality corridor
2 · M3–6	Reverse-factoring (SCF) for anchor hotel groups; open-banking scoring
3 · M6–12	Investor marketplace + reverse-auction; secondary market; SPV / international capital
4 · Y2+	Accounting / bank-API / bureau / e-sign integrations; public API; scale across corridors

10. Why Consistente

Consistente Ltd (Tallinn, EU) builds **production-grade AI for regulated industries** — reproducible pipelines, versioned models, auditable prompts — with a financial-services track record (LSEG, DBRS Morningstar, ARM, Microsoft). The Factorio platform is running today; the AI triage and reporting in Appendix A are live, not mock-ups.

Next step. A short call to walk through the platform and a live demonstration. Contact: Consistente Ltd · info@consistente.tech · consistente.tech.

Appendix A — Product user guide

An end-to-end tour of the platform. Screens are shown in Appendix B.

Public site - Home — the marketplace model at a glance: advance rate, days-to-funding, sectors served, multi-currency, and language switch (EN / UZ / RU / ES / FR). - **For sellers** — turn invoices into working capital in days; factoring, not a loan; no new debt on the balance sheet. - **For investors** — short-term, asset-backed returns; diversify across debtors, sectors and risk grades (A–D). - **How it works** — submit → verify → fund → settle. - **Pricing** — transparent, per-invoice fees; volume-based platform pricing.

Investor app - Dashboard — personalised KPIs: portfolio value, net annual return, earned to date, next settlement; recent-activity feed. - **Marketplace** — every fundable invoice as a card: debtor, sector, risk grade, amount, funding progress; filter by sector/grade/term/return. - **Invoice detail** — full transparency before funding: funding panel + debtor company profile. - **Portfolio** — net-return and account-value panels, aging table, payment-habits table, positions table. - **Statement** — unified ledger of cash movements; filter and CSV export. - **Auto-invest** — rule-based automated bidding (min grade, max per invoice, preferred sectors).

AI (live) - AI triage — chat-based invoice/application triage for suppliers. - **AI reporting** — chat-based portfolio reporting grounded in the investor's own positions.

FOR INVESTORS

Earn 8–12% on short-term, invoice-backed assets.

Factorio gives you access to a new asset class: verified commercial invoices. Short duration, transparent pricing, and real businesses on the other side.

Why invoice finance?

Short duration

Typical invoice terms of 30–90 days mean your capital isn't locked up for years. Quick turnover, frequent reinvestment.

Asset-backed

Every investment is backed by a verified commercial invoice from an operating business. Real receivables, not promises.

How it works

HOW IT WORKS

Invoice to cash in four simple steps.

01

Submit your invoice

Upload a verified invoice with payment terms of 15–180 days. Your customer must have received the goods or service.
