

Factorio — Payer (Debtor) User Guide

For payers / debtors — the buyers who owe the invoices. The payer anchors the credit in factoring: a specific, buyer-confirmed obligation. Sign in with the **Payer** role.

Payers confirm invoices so their suppliers can be financed, and (in reverse-factoring / supply-chain-finance programmes) can offer early payment to their whole supplier network without breaking their own terms.

Invoices to confirm

The invoices where you are named as the debtor, with amount, due date and status. **Confirm** the obligation (or dispute it) — confirmation is what lets the supplier draw an advance; on the SoliqOnline rails this confirmation is on official record.

The screenshot shows the Factorio Payer dashboard. The left sidebar contains navigation links for FACTORING (Dashboard, Marketplace, Portfolio, Statement, Auto-invest, AI Triage, AI Reports, Console), SALES (Pipeline), and WORKSPACE (Drive, Docs, Mail). The main content area is titled 'PAVER' and 'Invoices to confirm', with a subtitle: 'Invoices where O'zbekiston Pochtasi is the debtor. Confirm the obligation so suppliers can be financed.' Below this is a table with 5 columns: INVOICE, AMOUNT, DUE, STATUS, and an unlabeled column for status. The table contains 4 rows of invoice data. On the right, there is a 'Copilot' section with a text input and a 'Send' button. Below the input are four suggested prompts: 'How much have we funded?', 'Which sector has the most exposure?', 'Top debtors by concentration', and 'Summarise the sales pipeline'.

INVOICE	AMOUNT	DUE	STATUS	
INV-20260012	\$199,705	2026-05-09	funding	Confirmed
INV-20260026	\$183,266	2026-05-20	funding	Confirmed
INV-20260011	\$18,159	2026-07-27	funding	Confirmed
INV-20260021	\$97,544	2026-08-05	settled	Confirmed

Reverse factoring (supply-chain finance)

As a large buyer you can run a **reverse-factoring programme**: approve early payment for hundreds of suppliers at once. Suppliers get paid early; you keep your payment terms; the platform (funded by the bank, investors or an SPV) bridges the gap. See the money-flow diagram in the main product guide.
