

[TECHNOLOGY PROVIDER] × [BANK NAME]

B2B Invoice Factoring Platform

Technology Provider Partnership Proposal

*Market Opportunity · Platform Architecture · Partnership Structure · Commercial Terms ·
Responsibilities*

Prepared by [TECHNOLOGY PROVIDER] | Confidential | April 2026

1. Executive Summary

[TECHNOLOGY PROVIDER] is a fintech technology company proposing to provide its B2B invoice factoring platform to [BANK NAME] on a white-label, technology-as-a-service basis. The bank deploys [TECHNOLOGY PROVIDER]'s platform under its own brand, using its existing factoring licence, to offer Uzbekistan's SME sector a fast, fully digital invoice financing product.

[TECHNOLOGY PROVIDER] provides the technology. The bank provides the capital, the licence, and the client base. The bank earns the factoring discount income. [TECHNOLOGY PROVIDER] earns a SaaS platform fee and a per-transaction charge.

In addition, [TECHNOLOGY PROVIDER] proposes a deferred equity option: the right to acquire a 10% equity stake in the factoring operating entity at the end of Year 3. This option is structured to avoid any dilution of the bank's existing shareholding during the initial three-year period — the 10% is created as new equity at the point of exercise, not transferred from any current shareholder. This aligns [TECHNOLOGY PROVIDER]'s long-term interest with the bank's success without imposing any equity obligation on the bank upfront.

The timing is exceptional. Uzbekistan's Presidential Decree of August 12, 2024 mandated that banks must offer factoring services. The Civil Code was formally amended in April 2025 to introduce the legal framework for factoring. The addressable market is estimated at \$2 billion. Banks are under regulatory pressure to deliver a digital factoring product and the market is less than 2.5% penetrated. [TECHNOLOGY PROVIDER]'s platform is ready to deploy in 8–14 weeks from contract signing.

At a Glance	Detail
What [TECHNOLOGY PROVIDER] provides	White-label SaaS factoring platform, SoliqOnline API integration, debtor scoring engine, collateral registry integration, ongoing technical support and updates
What the bank provides	Factoring capital, banking / factoring licence, existing SME client base, Central Bank registration, AML/KYC compliance
Bank's revenue	Full discount rate earned on every invoice financed (2.5–8% per invoice per 30–90 day term) — bank keeps 100% of this income
[TECHNOLOGY PROVIDER]'s revenue	Monthly SaaS licence fee (\$4,000–\$6,000) + per-transaction fee (0.15% of financed invoice value)
Bank's technology capex	Zero — SaaS model; no upfront technology investment required
Time to first transaction	8–14 weeks from agreement signing
Regulatory basis	Presidential Decree No. 106 (12.08.2024); Civil Code amendments ZRU-1058 (17.04.2025); Law on Non-Bank Credit Organisations

2. Market Opportunity

2.1 The Regulatory Mandate

Uzbekistan has issued a presidential decree requiring banks to offer factoring services and built the legal infrastructure to support it. Regulatory demand exists before supply has caught up — creating an immediate commercial opportunity for the bank that moves first.

Regulatory Development	Date	Significance
Presidential Decree No. 106 — banks mandated to offer factoring; electronic factoring platform ordered; foreign currency factoring permitted from 2025	August 2024	Active regulatory obligation; banks not offering factoring are non-compliant with the decree's intent
Civil Code amendments ZRU-1058 — factoring formally introduced into Uzbek law; collateral registry integration required; priority of claims defined	April 2025	Legal framework now complete; factoring agreements have full statutory force
Refactoring permitted — banks may resell acquired monetary claims	2025	Balance sheet flexibility; bank can originate and sell invoices to manage liquidity
Foreign currency factoring — permitted where debtor is a non-resident	2025	Uzbek exporters can now access factoring against foreign invoices; new revenue stream
National Association of Factoring — establishment mandated	2024–2025	Industry standards being set now; first movers shape the standards and gain market legitimacy

2.2 The Market Gap

Metric	Figure	Notes
Addressable factoring market in Uzbekistan	\$2 billion	IFC / Trade Finance Global estimate
Currently financed via factoring (2024)	<\$50 million	Market is under 2.5% penetrated
Most advanced bank's 2025 projection	\$23 million	Aloqa Bank — currently the leading bank in factoring; set for comparison only
SMEs lacking adequate working capital	75%+	IFC assessment; SMEs represent 56% of Uzbekistan's GDP
Average B2B invoice payment wait time	60–90 days	Standard Uzbek commercial payment terms
Electronic invoices issued annually (Uzbekistan)	Hundreds of millions	SoliqOnline mandatory for all B2B transactions since 2020

The bank that builds the best digital factoring product in 2026 will capture a structurally dominant position in a \$2 billion market that is currently less than 2.5% penetrated. With [TECHNOLOGY PROVIDER]'s platform, the bank can be live and onboarding clients within

14 weeks — ahead of competitors who would need 12–18 months to build equivalent technology.

2.3 The Infrastructure Advantage — SoliqOnline

Uzbekistan has a government infrastructure asset that most emerging markets lack: mandatory electronic invoicing since January 2020. Every B2B invoice in the country passes through the SoliqOnline tax authority platform, creating a pre-verified, fraud-resistant foundation for factoring.

SoliqOnline Feature	What It Means for Factoring Risk
Every B2B invoice is digitally issued and tax authority-validated	Invoice authenticity is government-verified before it reaches the platform — invoice fraud is structurally eliminated at source
Buyer must confirm the invoice within 10 days in SoliqOnline	Debtor acceptance of the obligation is already on official record — no manual buyer confirmation process required
Debtor's tax filing status is accessible	Automated creditworthiness assessment using tax compliance data without branch visit or manual research
Full invoice history is archived for both parties	Dispute resolution is fast and evidence-based; complete audit trail from issuance
JSON format with digital signature	[TECHNOLOGY PROVIDER]'s platform connects via API, pulling pre-verified invoice data automatically and eliminating manual document processing entirely
Collateral registry integration mandated by ZRU-1058	Assignment of monetary claims registered automatically via platform API in real time; bank's legal priority established in under 60 minutes

No bank in Uzbekistan has yet built a production-grade SoliqOnline factoring integration. [TECHNOLOGY PROVIDER]'s platform is designed from the ground up to exploit this infrastructure — turning every government-verified invoice in Uzbekistan into a potential factoring asset with near-zero fraud risk and near-zero manual processing cost.

3. The Platform — How It Works

3.1 Transaction Flow — Step by Step

Every invoice financing transaction follows the same automated flow. Manual bank staff involvement is limited to a single credit approval click on a pre-populated screen.

Step	Day	Action	Who Acts	Platform Role
1	Day 0	Supplier delivers goods or services to buyer (debtor)	Supplier	None
2	Day 0–10	Supplier issues electronic invoice via SoliqOnline; buyer confirms within 10 days	Supplier / SoliqOnline	Platform monitors SoliqOnline API; verified invoice appears automatically in supplier's dashboard
3	Day 1–10	Supplier selects invoice on platform and requests financing	Supplier	Platform verifies invoice data against SoliqOnline; runs automated debtor credit scoring; displays indicative rate in seconds
4	Day 1–10	Bank credit officer reviews pre-populated request on bank dashboard and approves	Bank	One-click approval; all data pre-populated; full audit log recorded
5	Day 1–10	Platform registers assignment of monetary claim in Central Bank collateral registry (automated)	Platform automated	API call to collateral registry; legal priority established; confirmation returned within 60 minutes
6	Day 1–10	Bank transfers advance (e.g. 85% of invoice value) to supplier's bank account	Bank	Platform generates payment instruction with full reference data
7	Day 30–90	Platform sends automated payment reminders to debtor at Day -7, -3, -1	Platform automated	SMS and email; configurable templates; escalation alerts to bank if no response
8	Day 30–90	Debtor pays full invoice value to bank's designated collection account	Debtor	Platform tracks receipt; marks invoice as settled
9	Day 30–90	Bank retains advance + discount fee; platform releases net balance to supplier	Bank / Platform	Automatic settlement calculation; bank releases net balance; cycle data feeds scoring model

From invoice upload to advance receipt: 24–48 hours. Compared to traditional bank factoring (1–3 weeks, multiple branch visits, manual document review), [TECHNOLOGY PROVIDER]'s platform delivers a 10–15x faster process. The bank's operational cost per transaction is a fraction of manual factoring.

3.2 Platform Modules Delivered to the Bank

Module	Description	Delivered As
--------	-------------	--------------

Supplier Portal	Web and mobile interface: view SoliqOnline-synced invoices, request financing, track advances, download statements	White-label under bank's brand
Bank Credit Dashboard	Internal bank interface: review requests, set credit limits per debtor, approve transactions, monitor portfolio in real time	Hosted; browser-based; bank staff only
Debtor (Buyer) Portal	Optional SCF module: large corporate buyers pre-approve supplier invoices, enabling reverse factoring programmes	White-label under bank's brand
SoliqOnline API Integration	Real-time connection to Uzbekistan's government e-invoice system: automatic invoice import, verification, status monitoring	Pre-built; configured to bank's API credentials
Collateral Registry Integration	Automated registration of invoice assignments in Central Bank collateral registry as required by ZRU-1058	Pre-built; bank's registry account used
Debtor Scoring Engine	Automated creditworthiness assessment: SoliqOnline tax data, CRIF bureau, platform payment history, sector risk benchmarks	Integrated; bank configures risk parameters and thresholds
Notification & Collections Assist	Automated SMS/email payment reminders to debtors; overdue alerts to bank; reminder schedule configurable	Configured to bank's templates and branding
Reporting & Analytics	Real-time portfolio dashboard: GMV financed, outstanding book, default rates, average discount, debtor concentration, sector breakdown	Bank admin interface; exportable reports

3.3 Eligible Invoices

Criterion	Requirement
Invoice type	B2B only — both supplier and debtor are legal entities; consumer invoices excluded
Invoice status	Confirmed by debtor in SoliqOnline, or signed supply contract evidencing the obligation
Invoice age	Issued within the last 60 days; at least 15 days of payment term remaining
Minimum invoice value	\$500 equivalent (approximately 5 million UZS)
Debtor credit status	No active defaults in CRIF bureau; tax obligations current in SoliqOnline (automated check)
State-owned debtors	Permitted where invoice arises from tender or competitive procurement (per ZRU-1058, Article on eligible entities)
Cross-border invoices	Permitted from 2025 where debtor is a non-resident; foreign currency factoring available

4. Financial Model — What the Bank Earns

4.1 Single Transaction Example

Invoice face value: \$10,000 | Advance rate: 85% | Term: 60 days | Discount: 5%

Cash Flow Item	Amount	Direction	Day
Bank advances to supplier (85% of face value)	\$8,500	Bank → Supplier	Day 1
Debtor pays full invoice value at maturity	\$10,000	Debtor → Bank	Day 60
Bank releases net balance to supplier	\$1,500	Bank → Supplier	Day 60
Bank discount income (gross)	\$500	Bank keeps	Day 60
[TECHNOLOGY PROVIDER] per-transaction fee (0.15% of \$8,500 advance)	\$12.75	Bank → [TECHNOLOGY PROVIDER]	Day 60
Bank net income on this invoice	\$487.25	Bank keeps	Day 60
Annualised return on capital deployed	~29.6% p.a.	$(\\$487 / \\$8,500) \times (365/60)$	—

The bank earns approximately 30% annualised on capital deployed per invoice. This compares favourably to standard SME term lending at 22–28% p.a. — with substantially lower credit risk, because every invoice is pre-verified by the government, the debtor has confirmed the obligation in SoliqOnline, and the bank holds a registered priority claim through the Central Bank collateral registry.

4.2 Revenue Projections — Year 1 to Year 3

Conservative assumptions: 20 active SME suppliers at Month 4, 150 by Month 12; average invoice \$5,000; average term 60 days; blended discount rate 5%; advance rate 85%.

Metric	M3	M6	M9	M12	Year 2	Year 3
Active supplier clients	8	30	75	150	400	900
Invoices financed / month	20	90	250	550	1,500	3,800
Monthly GMV financed	\$100K	\$450K	\$1.25M	\$2.75M	\$7.5M	\$19M
Capital deployed (avg. monthly)	\$85K	\$383K	\$1.06M	\$2.34M	\$6.4M	\$16.2M
Monthly discount income (5% on 60d)	\$5,000	\$22,500	\$62,500	\$137,500	\$375,000	\$950,000
[TECHNOLOGY PROVIDER] platform fee (est.)	\$4,000	\$5,400	\$9,400	\$18,200	\$42,000	\$94,000
Bank net monthly income	\$1,000	\$17,100	\$53,100	\$119,300	\$333,000	\$856,000

Bank annual net income	—	—	—	~\$1.05M	~\$4.0M	~\$10.3M
------------------------	---	---	---	----------	---------	----------

4.3 Break-Even

Item	Value	Notes
[TECHNOLOGY PROVIDER] monthly fixed SaaS fee	\$4,000–\$6,000	Fixed regardless of volume
Per-transaction fee on avg. \$5,000 invoice	\$7.50 per invoice	0.15% of advance value (\$8,500 × 0.15%)
Break-even GMV	~\$80,000–\$120,000/month	Approximately Month 3–4
Platform cost as % of income at Month 12	13.2%	Bank retains 86.8% of gross discount income as net income

5. Partnership Structure — Technology Provider Model

5.1 The Relationship Defined

[TECHNOLOGY PROVIDER] enters this partnership as a technology provider and SaaS vendor. The bank is the financial services provider and the regulated entity. For the first three years the partnership operates as a pure technology services arrangement: [TECHNOLOGY PROVIDER] earns platform fees and the bank earns 100% of factoring discount income.

At the end of Year 3, [TECHNOLOGY PROVIDER] holds a deferred equity option: the right to acquire a 10% stake in the factoring operating entity. The option is structured as a new share issuance, specifically to avoid diluting the bank's existing shareholding. Until the option is exercised, [TECHNOLOGY PROVIDER] holds no equity, no board seat, and no claim on factoring income beyond its agreed platform fees.

Element	[TECHNOLOGY PROVIDER]	[BANK NAME]
Role	Technology provider / SaaS vendor	Financial services provider / licensed factor
Owns	Platform software, integrations, scoring algorithms, all IP	Customer relationships, factoring licence, capital deployed, all discount income earned
Earns	Monthly SaaS fee + per-transaction fee	100% of discount rate on every invoice financed (2.5–8%)
Credit risk	None — [TECHNOLOGY PROVIDER] has no exposure to invoice defaults whatsoever	Bank bears all credit risk; mitigated structurally through SoliqOnline verification, debtor scoring, and collateral registry
Regulatory status	Technology vendor — no financial licence required	Bank operates under its existing banking licence and Central Bank factoring registration
Capital	Zero capital deployed by [TECHNOLOGY PROVIDER]	Bank deploys its own capital to fund invoices
Brand	Platform operates under bank's brand; [TECHNOLOGY PROVIDER] is not visible to end users by default	Bank's brand on all customer-facing interfaces; co-branding optional
Data	Processes transaction data solely to operate the platform; governed by data processing agreement	Bank owns all customer and transaction data; data processing agreement in place

5.2 Regulatory Position

Question	Answer
Does [TECHNOLOGY PROVIDER] need a factoring licence?	No. [TECHNOLOGY PROVIDER] is a software vendor. The bank conducts the regulated activity (financing against invoice assignment). Technology providers to licensed banks are not required to hold financial licences in Uzbekistan.
Does [TECHNOLOGY PROVIDER] need Central Bank registration?	No, under the white-label model. Registration is required only for entities providing factoring services directly. [TECHNOLOGY PROVIDER] provides technology to the bank; the bank is the

	registered entity providing factoring services.
Who registers with the National Association of Factoring?	The bank, as the factoring service provider.
Who bears AML / KYC obligations?	The bank, as the regulated entity. [TECHNOLOGY PROVIDER] provides KYC workflow tools within the platform; the bank's compliance team makes all regulatory determinations. This is standard for white-label fintech arrangements.
SolliqOnline API access?	The bank holds the authorised SolliqOnline API credentials. [TECHNOLOGY PROVIDER] integrates via the bank's authorised connection. A data processing agreement governs [TECHNOLOGY PROVIDER]'s handling of data accessed through this connection.

6. Responsibilities — Who Does What

6.1 [TECHNOLOGY PROVIDER]'s Responsibilities

Area	Responsibility	SLA
Platform delivery	Deliver fully configured, white-label factoring platform within the agreed implementation timeline	Go-live within 14 weeks of contract signing
SoliqOnline integration	Build and maintain real-time API connection to SoliqOnline for automatic invoice import and verification	Real-time sync; 99.5% integration uptime
Collateral registry integration	Automate registration of invoice assignments in the Central Bank collateral registry as required by ZRU-1058	Registration confirmed within 60 minutes of bank approval
Debtor scoring engine	Maintain and improve automated creditworthiness scoring using SoliqOnline data, CRIF bureau, and platform history	Score generated in <30 seconds per request
Platform uptime	Maintain platform availability for bank staff and end users	99.9% uptime SLA; planned maintenance notified 72 hours in advance; SLA credits for breach
Security	Maintain OWASP Top 10 compliance; annual penetration testing; ISO 27001 alignment; annual security audit report to bank	Annual audit report delivered within 60 days of year-end
Regulatory updates	Update platform to reflect changes in Uzbek factoring legislation within 30 days of regulation taking effect	Regulatory-driven releases prioritised above feature releases
Training	Train bank credit officers and IT staff at go-live; refresher training on major platform updates	Initial training before go-live; documentation in Uzbek, Russian, and English
Technical support	Tier-2 and Tier-3 support for platform issues; Tier-1 handled by bank's helpdesk	Critical: 2-hour response, 8-hour resolution; Standard: next business day
Monthly reporting	Platform performance report to bank: uptime, volumes, scoring accuracy, error rates	By 5th working day of following month

6.2 [BANK NAME]'s Responsibilities

Area	Responsibility	SLA
Factoring licence	Maintain valid factoring registration with the Central Bank throughout the agreement term	Registration maintained and renewed proactively
Credit decisioning	Make all final approval decisions on financing requests; set credit limits per debtor and per supplier; bank is solely responsible for all credit decisions	Bank credit officer reviews platform recommendation; final decision is bank's alone
Capital provision	Deploy factoring capital to fund approved invoices; maintain adequate liquidity	Advance paid to supplier within 24 hours of bank approval
AML / KYC	Conduct customer due diligence on all suppliers and debtors; [TECHNOLOGY PROVIDER]	Per Central Bank AML regulations

	provides workflow tools but bank makes all regulatory determinations	
SolliqOnline credentials	Provide [TECHNOLOGY PROVIDER] with authorised SolliqOnline API credentials before go-live; maintain validity	Credentials provided during implementation; renewed proactively
Collateral registry account	Maintain the bank's Central Bank collateral registry account; ensure platform's automated registrations are covered under the bank's account	Account funded and maintained throughout term
Client onboarding (KYC)	Conduct final KYC approval for each supplier and debtor joining the platform through the bank's standard procedures	KYC decision within 3 business days of complete application
Collections	Manage collection of overdue invoices after [TECHNOLOGY PROVIDER]'s automated reminder cycle is exhausted; engage legal recourse as appropriate	Collections process initiated at Day +10 overdue
Regulatory reporting	File all required reports with the Central Bank and National Association of Factoring as the registered factoring service provider	Per regulatory schedule; [TECHNOLOGY PROVIDER] provides data extracts on request
Platform fees	Pay [TECHNOLOGY PROVIDER]'s monthly SaaS fee and per-transaction fee as agreed	Monthly invoice; payment within 15 business days

6.3 Shared Responsibilities

Area	Joint Action
Implementation	Joint implementation team formed at contract signing: bank's IT and compliance leads + [TECHNOLOGY PROVIDER]'s implementation manager. Weekly status meetings throughout implementation.
Regulatory monitoring	Both parties monitor Central Bank and legislative developments. [TECHNOLOGY PROVIDER] flags platform-relevant changes; bank flags compliance-relevant changes. Joint response plan agreed within 30 days of any new regulation.
Incident response	Any security incident or suspected fraud: both parties activate response plans within 2 hours and notify each other immediately. Joint investigation for incidents affecting platform or customer data.
Client acquisition	Bank provides warm introductions to its existing eligible SME clients; platform provides onboarding support and case study materials.
Disputes	Customer complaints involving both platform operation and bank decisions: joint first review within 5 business days. Escalation path defined in the Technology Services Agreement.

7. Proposed Commercial Terms

[TECHNOLOGY PROVIDER]'s opening proposals. All terms are negotiable.

Term	Proposed	Notes
Agreement type	Technology Services Agreement (SaaS) with Deferred Equity Option	Technology services for Years 1–3; deferred 10% equity option exercisable at end of Year 3
Duration	36 months, auto-renewable for 12-month periods	Either party may terminate with 6 months' notice after Month 12
Exclusivity	12-month exclusivity: [TECHNOLOGY PROVIDER] will not white-label this platform to competing Uzbek banks during the exclusivity window	Gives bank 12 months to establish dominant market position; does not restrict bank from other technology partnerships
Monthly SaaS licence fee	\$4,000–\$6,000 per month (fixed)	Covers hosting, maintenance, SoliqOnline integration, collateral registry integration, regulatory updates, support, and documentation
Per-transaction fee	0.15% of advance value paid per approved financing	On \$8,500 advance (85% of \$10,000 invoice): \$12.75 per transaction
Minimum monthly fee	\$4,000/month (absorbed by SaaS fee at low volume)	Protects operating cost baseline; bank's cost only increases with volume above break-even
Implementation fee	\$15,000–\$25,000 one-time	Covers SoliqOnline integration, collateral registry integration, white-label configuration, UAT, and go-live. 50% at signing, 50% at go-live
Training	Included in implementation fee (up to 3 sessions)	Additional training sessions at \$500 each
Revenue share alternative	Alternative structure: [TECHNOLOGY PROVIDER] earns 3–5% of bank's gross discount income instead of per-transaction fee	Aligns incentives more directly; bank may prefer at low volume; higher cost for bank at scale
Deferred equity option (Year 3)	[TECHNOLOGY PROVIDER] holds the right to acquire a 10% equity stake in the factoring operating entity at the end of Month 36	Option structured as new share issuance; does not dilute the bank's existing shareholding; exercise price = \$1.00 (one US dollar) — granted at nominal value in recognition of [TECHNOLOGY PROVIDER]'s technology contribution over the three-year period; option lapses if not exercised within 60 days of Month 36
Equity option conditions	Option exercisable only if: (a)	All three conditions must be

	partnership has been in continuous operation for 36 months; (b) [TECHNOLOGY PROVIDER] is not in material breach; (c) no termination notice has been issued by either party	met simultaneously; if not met at Month 36, option lapses without compensation
Equity option — bank protections	Bank retains right of first refusal if [TECHNOLOGY PROVIDER] wishes to sell its 10% stake; [TECHNOLOGY PROVIDER] equity carries no veto rights and no right to appoint board members unless separately agreed; dividends paid pro-rata to equity	Bank retains full operational and governance control; [TECHNOLOGY PROVIDER]'s stake is a financial participation only, not a control right
Data ownership	All customer and transaction data belongs to the bank	[TECHNOLOGY PROVIDER] processes data to operate the platform only; no right to sell or use data externally; full data export on termination
IP ownership	All platform IP belongs to [TECHNOLOGY PROVIDER]	Bank receives a licence to use the platform; ownership never transfers
Termination by bank	6 months' notice after Month 12; 3 months' notice for material breach by [TECHNOLOGY PROVIDER]	Bank receives data export in standard format within 30 days; reasonable transition support provided
Termination by [TECHNOLOGY PROVIDER]	6 months' notice; immediate on non-payment >45 days or insolvency event	Platform kept live during notice period; bank's customer data returned in full
Governing law	Republic of Uzbekistan; UNCITRAL arbitration in Tashkent	Practical for both parties; internationally enforceable
SLA credits	5% monthly fee credit per 0.1% downtime below 99.9% SLA	Capped at 30% of monthly fee; excludes planned maintenance windows notified in advance

8. What the Bank Gets from This Partnership

Benefit	Detail	Estimated Value
Presidential decree compliance	Immediately satisfy the August 2024 mandate to offer factoring services with a production-grade digital product	Regulatory risk eliminated; no Central Bank enforcement exposure
Zero technology capex	No software development project. No IT team. No 18-month build timeline. Platform live in 8–14 weeks.	Saves \$300K–\$1M in technology development; saves 12–18 months of time
SoliqOnline integration — delivered	The hardest technical piece — the government API integration — is pre-built and handed over as part of the platform	6–12 months of specialist development time saved
High-yield capital deployment	~30% annualised return on capital deployed per invoice, with lower credit risk than equivalent unsecured SME lending	Better risk-adjusted yield than most existing bank products
New SME client acquisition	Every supplier joining the platform becomes a bank client. Target: 150 suppliers by Month 12; 900 by Year 3.	150–900 new SME banking relationships at near-zero acquisition cost
First-mover market position	With the market under 2.5% penetrated and competitors needing 12–18 months to build, the bank that launches first captures structural dominance	Disproportionate market share locked in while competitors are still building
Cross-border factoring revenue	Platform supports foreign currency factoring for Uzbek exporters billing non-resident debtors — a product no Uzbek bank currently offers at scale	New revenue stream from the export SME sector
Supply chain finance expansion	Platform's buyer portal enables reverse factoring / SCF programmes targeting the bank's large corporate anchor clients and their supplier networks	Deepens corporate relationships; expands SME lending book with lower credit risk
12-month exclusivity	[TECHNOLOGY PROVIDER] will not white-label this platform to competing Uzbek banks during the exclusivity period	12 months' head start in a \$2 billion market

9. Credit Risk — How the Bank Is Protected

The bank bears all credit risk on financed invoices. The structural features of SoliqOnline-integrated factoring make this risk substantially lower than equivalent SME lending.

9.1 Structural Risk Mitigants

Risk Factor	Traditional SME Lending	Platform Factoring
Invoice authenticity	Manual document verification; fraud possible	Government-verified via SoliqOnline; tax authority-validated and digitally signed — fraud structurally eliminated
Debtor obligation	General creditworthiness assessment of borrower	Specific named debtor has confirmed a specific monetary obligation in SoliqOnline
Collateral / legal claim	Manual registration; time-consuming; sometimes incomplete	Automatic collateral registry registration; bank holds legal priority over all other creditors for this receivable within 60 minutes
Credit assessment	Branch visit; manual financial analysis; 1–2 weeks	Automated scoring in <30 seconds using live SoliqOnline tax data + CRIF bureau
Concentration risk	Loan book may be concentrated by client or sector	Natural diversification across many suppliers, many debtors, many invoices; platform monitors concentration automatically
Recovery on default	Legal process against borrower; collateral sale; months	Invoice is a direct statutory debt obligation; debtor is a registered company with a confirmed obligation; legal recourse faster and clearer

9.2 Default Scenarios on \$2.34M Deployed Book (Month 12)

Scenario	Default Rate	Default Value	Monthly Discount Income	Bank Net Position
Normal	1.5%	\$35,100	\$137,500	+\$102,400
Elevated	4.0%	\$93,600	\$137,500	+\$43,900
Stress	8.0%	\$187,200	\$137,500	–\$49,700

Even at 4% default rate — well above expected ranges for SoliqOnline-verified invoices from credit-scored debtors — the bank remains profitable on a monthly basis. The stress scenario (8%) would require simultaneous systemic defaults across sectors: a macro-economic event, not a platform-specific risk. For reference, Aloqa Bank publishes factoring discount rates of 2.5–8%, implying their internal expected default rates are well below 2%.

9.3 Bank's Risk Controls — All Configurable in the Platform

Control	How It Works
Maximum advance rate	Bank sets maximum % of invoice face value to advance (e.g. 85%); platform-configurable parameter
Maximum exposure per debtor	Bank sets credit limit per debtor company; platform blocks new requests when limit is reached
Sector concentration limits	Bank sets maximum % of book in any single sector; platform alerts when approaching threshold
Minimum debtor credit score	Bank sets minimum acceptable score; platform automatically declines below-threshold requests before presenting to bank
Invoice age limits	Bank sets maximum invoice age; platform filters ineligible invoices before they appear on the bank's dashboard
Manual override	Bank credit officer can override any automated recommendation with reason recorded in audit log
Real-time portfolio view	Dashboard shows outstanding book by debtor, sector, age, and payment status; concentration alerts configurable

10. Implementation Timeline

Phase	Weeks	Activities	Milestone
Phase 1 Contracting	1–2	Technology Services Agreement signed; implementation fee (50%) paid; joint implementation team established	Contract signed
Phase 2 Configuration	2–6	[TECHNOLOGY PROVIDER] configures white-label platform with bank's branding, language (Uzbek / Russian / English), and credit policy parameters; SoliqOnline API credentials provided	Platform configured and branded
Phase 3 Integrations	4–9	SoliqOnline integration completed and tested in UAT; collateral registry integration tested; CRIF bureau connection established	All integrations live in test environment
Phase 4 Compliance & Training	8–11	Bank's compliance team reviews AML/KYC workflows; legal review of data processing agreement; bank staff training delivered	Compliance sign-off obtained
Phase 5 Pilot	10–12	Soft launch with 3–5 existing bank SME clients as first suppliers; first invoices financed on live platform; issues resolved	First live transaction completed
Phase 6 Full Launch	13–14	Platform open to all eligible SME suppliers; second implementation fee payment; go-live review meeting	Public launch
Phase 7 Growth	Month 4+	Ongoing: new supplier onboarding, product iterations, quarterly business reviews, credit limit reviews, cross-border module activation	Quarterly review milestones

11. Next Steps

Step	Action	Owner	Timeline
1	Initial meeting: [TECHNOLOGY PROVIDER] presents live platform demo to bank's digital banking and credit teams	Both parties	Within 2 weeks
2	Bank provides feedback; identifies key questions for legal and compliance teams	Bank	Week 3
3	Term sheet exchanged: fee structure, exclusivity scope, and implementation timeline confirmed in principle	Both parties	Weeks 4–5
4	Technology Services Agreement draft reviewed by both legal teams; [TECHNOLOGY PROVIDER] legal available for Q&A	Bank legal + [TECHNOLOGY PROVIDER]	Weeks 5–7
5	Data processing agreement and SoliqOnline API access protocol reviewed by bank's IT and compliance; [TECHNOLOGY PROVIDER] provides technical documentation	Bank IT + [TECHNOLOGY PROVIDER]	Weeks 6–7
6	Technology Services Agreement signed; implementation fee (50%) paid; implementation team formed	Both parties	Week 8
7	Implementation begins; target go-live Week 14	[TECHNOLOGY PROVIDER] implementation lead	Weeks 8–14
